

SAFE-World Project/Initiative Summary

Country: Haiti

Project/Initiative Title: ORE (Organisation for the Rehabilitation of the Environment)

Nos. farmers: 20,000

Hectares: 10,000

Agro-Ecological Zone: V

Improvement types

1x	2x	3	4	5	6x	7	8	9
----	----	---	---	---	----	---	---	---

A. Key Impacts

A1 – Productivity

	Before/Without	After/With	% change
Fruit trees			New crop
Maize/ sorghum			42

A2 – Impacts on natural capital

Increased incentives to invest in agriculture/ farming

A3–A4 – Impacts on households and individuals (human capital)

2,000 farmers and technicians trained in propagation/ grafting

A5 – Key changes in farm / regional system

?? Annual value of commercial fruits now exceeds rotational revenue for staples

?? 250,000 grafted trees planted in 1990s

?? significant increase in incomes

?? Fruit tree grafting – citrus and mango

?? Top-grafting of existing stock

?? New stock (maize, sorghum, beans)

?? Improved seeds for rainfed farming

?? 42% increase in returns

B. Types of Sustainable Agriculture Improvements

Type 1: Better use of available renewable natural capital

Type 2: Intensification of single sub-component of farm system

Type 3: Diversify by adding new productive natural capital and regenerative components

Type 4: Better use of non-renewable inputs and technologies

Type 5: Social and participatory processes leading to group action for making better use of natural capital

Type 6: Human capital building through training-learning programmes

Type 7: Access to Finance

Type 8: Add value by processing to reduce losses and increase returns

Type 9: Add value by direct or organised marketing of produce to consumers

	Yes/No	Narrative
Type 1	x	Tree-grafting to transform low quality fruit trees
Type 2		
Type 3		
Type 4	x	
Type 5		
Type 6	x	
Type 7		
Type 8		
Type 9
