

High temperatures

As we are experiencing unusually high external temperatures, you may find it useful to refer to guidance on temperature at work on the University's website.

[Temperature in indoor workplaces](#): Give guidance on management and personal controls and information on what to do if there is an ongoing problem with temperature control

[Working in the Sun](#): Gives guidance on managing risks from the sun and hot, humid conditions. A new link to the IOSH *No Time to Lose* campaign on solar radiation has been included. It gives access to free resources to assist with raising awareness of the risks, including posters, pocket cards, leaflets and toolbox talks
