Umphafa project

The UmPhafa Private Nature Reserve, situated in KwaZulu Natal, South Africa, is a 6,000 hectare reserve comprised of three farms previously managed for cattle and encompasses a wide range of habitats from acacia savannah and bushveld to mountainous terrain. Due to previous agricultural practices many of the natural inhabiting species had been lost. The project is partnered with Colchester Zoo.

UmPhafa’s goal is to "To rehabilitate the habitat of UmPhafa as an example of the region's previous natural condition through the management of indigenous flora and fauna in order to achieve a model of sustainable conservation for the development and promotion of environmental education"

UmPhafa Private Nature Reserve offers internships to people who have a passion and an interest to learn about African Wildlife Conservation and Reserve Management. The internships are by run by the Reserve Management Team which ensures that interns are mentored by our most senior and experienced staff members. It is a fantastic and rare opportunity to work alongside a team with many years of experience and gain creditable work experience whilst knowing that the contribution is having a direct influence on the wellbeing of the flora and fauna on the reserve. Data that volunteers collect will be vital in making key management decisions.

KwaZulu-Natal, South African region where the project is located is safe and popular tourist destination with most people spending time in Durban and the wildlife reserves. South Africa is known for high crime rates which mostly occur in townships and isolated areas and usually away from tourist destinations. Weather conditions are generally very good with very little adverse weather conditions.
