Quick Guide

Time management: why, what, how?

Why it matters...

How often do you find yourself saying: “I’ll do it when I have more time?” But when will you have more time? Today has 24 hours, as will tomorrow and the day after...

So time needs to be managed. Managing your time well helps you to:

- Meet your deadlines consistently
- Avoid stress
- Be more creative
- Feel that you are controlling your work, rather than it controlling you and ...
- Feel good about your work

What do I need to do?

Managing your time well depends on you being clear at any one point about what your objectives are. With that clarity, you can ask yourself whether the task you are about to work on contributes towards those objectives: if it doesn’t don’t do it!

There are many useful tools and tips to help you manage your time better. You’ll find several in this guide. The essence of good time management though is self-discipline: acting according to what you think instead of how you feel in the moment.

So be clear on what your objectives are and allocate your time to tasks and activities that contribute towards them.

How it works

Think

- What are your key objectives? List them.
- Estimate (or better still log) how much of your time you spend each day on each objective.
- Prepare to be horrified! How much of your time is spent on matters that don’t contribute towards your objectives? A

Plan

- Make a series of plans: this year, this term, this month, this week, today.
- Prioritise, e.g. what must be done today, what should be done today, what might be done today.
- Recognise your prime time. When is it best to do creative, routine, demanding and interesting work?
- This is where the self-discipline is crucial: do what you planned to do!
- Keep reviewing the plan. You may need to change it if circumstances change, but don’t do it lightly.
- Reflect on the plan, e.g. did you over- or underestimate the time required? Can you learn from the experience so that your next plan is more accurate?
How will I know I have got it right?

Managing your time is not always easy, but it should lead to:

• Meeting your deadlines consistently
• A reduction in stress and anxiety
• Better performance in your job
• Feeling good about your work
• And it will contribute to a stronger University performance.

Tips for managing time

• Set clear goals and SMART objectives.
• Prioritise tasks so that you work on the most important (i.e. most valuable) and most urgent first.
• Manage interruptions. Identify your ‘time robbers’ and find ways of dealing with them.
• Avoid procrastination. Visualise yourself getting on with the task and how good you will feel if you complete it on time. Compare that with how bad you will feel if you don’t.
• Recognise the impact that procrastination can have on your reputation— is it really worth it?

“Lost time is never found again.” – Benjamin Franklin

Research confirms that the more time is spent on planning a project, the less total time is required for it.

According to John Adair, the 80:20 rule applies to time management: 20% of your time produces 80% of your high-quality output. Manage the 20% (your prime time) well.

Give yourself breaks. We tend to work harder just before and just after a break. The Pomodoro technique provides a mechanism for leveraging this effect:
